

Espira Global Innovation

An actively managed global equity fund that invests in innovation-driven companies whose products and services not only shape the modern world, but also drive its future. Our investment strategy is based on the belief that sales growth is the primary driver of long-term returns and that innovative companies not only grow faster but are also significantly more resilient.

A new era of technology-led development

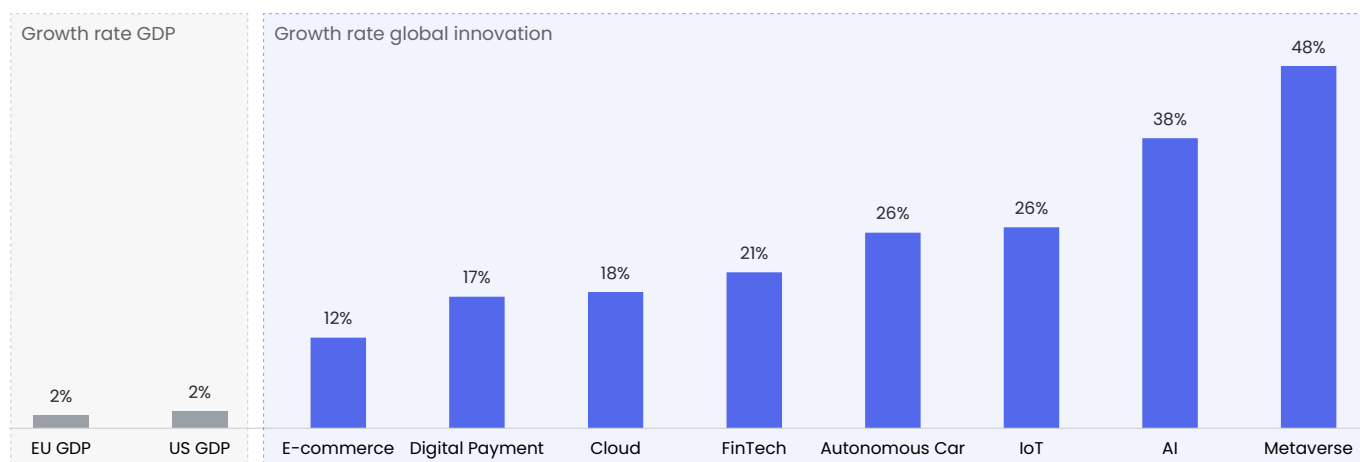

We are at the forefront of a new cycle of innovation, where breakthroughs in areas such as artificial intelligence and chips for advanced computing will accelerate development exponentially. As the technology matures, technological advances will spill over from the IT sector to the wider economy. Over the next decade, hundreds of millions of jobs are expected to be automated, healthcare will be transformed with new computer-generated and personalised medicines, factories will be autonomously controlled and we will see the first truly self-driving cars. This new cycle of innovation is expected to be the fastest in history, creating great opportunities for companies that are early adapters and adopt the new technology.

Espira Global Innovation gives investors access to the high-quality companies that are leading this development and the financial opportunities it creates. Our experienced portfolio management team actively selects portfolio companies for long-term financial growth.

Fund benefits

- › Global Equity Exposure
- › Investments supported by strong trends in innovation
- › Actively selected companies with reasonable valuations in relation to long-term potential
- › Focus on quality companies and portfolio balance
